

AIR FILTERS

Engines require a certain amount of clean air to operate properly. **Air filters** prevent dirt, dust and other contaminants from entering the engine, and allow the engine to perform at its best by providing a supply of air with the least amount of air resistance possible.

The replacement interval for the air filter has been set to suit the usage time.

Why is it important to use Honda Genuine Air Filters?

OUTSTANDING FILTER SYSTEM

Honda Genuine Air Filters use an original viscous type of filter. Viscous type air cleaner elements have a **special oil** applied to the filter paper that **guarantees outstanding performances**:

- Air intake efficiency remains high as there is **minimal airflow resistance**.
- A proprietary filter paper material and structure mean the air filter has a **long operating life**.

ADAPTED FILTERING

Honda Genuine Air Filters have been developed to ensure the **maximum performance** of each engine, by testing them for performance to suit the temperature, dust quality and environment of each particular region.
