

POLLEN FILTERS

The mission of the **pollen filter** is to protect the drivers health. Dust, pollen and other contaminants from air pass through the filter, both from outside the vehicle and from within the cabin. The cabin filter is your best protection from pollen and fine or ultra-fine dusts (coming from both natural and human sources). It ensures that clean air is always supplied to the heating and ventilation system.

FEW DRIVERS ARE AWARE OF THE NEED TO REGULARLY CHANGE CABIN FILTERS

FINE DUST PARTICLES ARE DANGEROUS TO YOUR HEALTH

When inhaled in, particles smaller than approximately 2 microns are absorbed into the lower respiratory tract and lungs and cannot be expelled by exhaling: they remain as deposits.

Fine dust diffusion

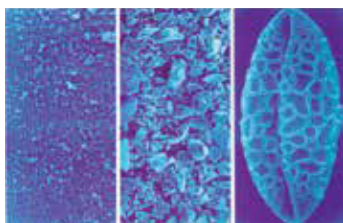

OTHER BAD EFFECTS

- Reduced efficiency of the heating and air conditioning systems
- Less favourable hygienic conditions
- Unpleasant odours
- Poor demisting of the front windscreen

POLLEN FILTERS

Why is it important to use Honda Genuine Pollen Filters?

Industrial
pollution

Traffic
pollution

Pollen

Viewed under the microscope we can see the superiority of Honda Genuine Pollen Filters: 3 layers in comparison with other products. Due to these 3 layers the Honda Genuine Pollen Filter will also filter the small particles.

ADAPTED FILTERING

Honda Genuine Pollen Filters have been specially designed for each particular model of vehicle to ensure that dust, pollen and other contaminants cannot flow through to the evaporator via air gaps.

HONDA GENUINE POLLEN FILTERS STRENGTHS

- Designed with a superior filter paper with air holes that trap fine dirt and dust (the area of the filter differs by model)
- High efficiency due to minimal airflow resistance
- Long operating life thanks to a superior filter paper material and structure
